

# IDSA: Impulsando la Estandarización y la Interoperabilidad en los Espacios de Datos

PRIMERA CUMBRE DE ESPACIOS DE DATOS GAIA-X ESPAÑA

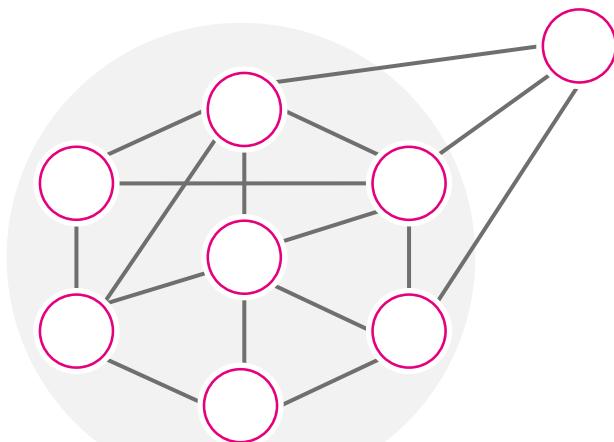

Silvia Castellvi,  
Research and Standardisation Director, International Data Spaces

# Trustful data sharing takes place in data spaces

*Where participants share one common trust framework*

INTERNATIONAL DATA  
SPACES ASSOCIATION

A decentralized and dynamic data ecosystem:  
with many-to-many interactions

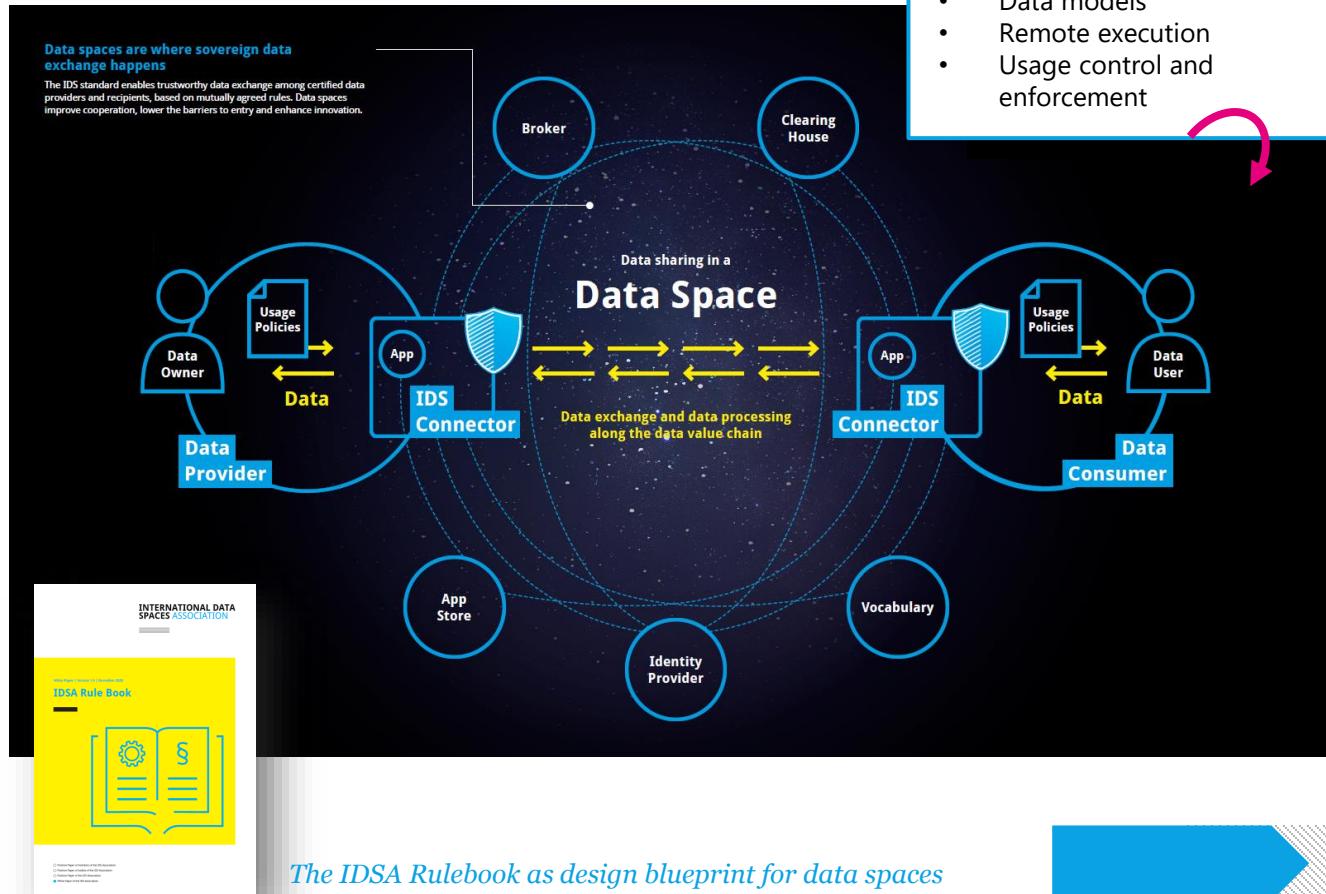

A **data space** is the sum of all end points that are able to share data with each other.

- Decentralized/Centralized/Federated data architecture: no physical data integration, leave data where it is
- Interoperability: no silos, no vendor-dependency
- Data Sovereignty and traceability
- Trusted participants, services, components
- Usage control for data as economic asset

# Building data spaces

A holistic guide for makers

What exactly does "data economy" call for?

- Secure end2end data exchange
- Trusted parties
- Monetize data and usage policies
- Data models
- Remote execution
- Usage control and enforcement

INTERNATIONAL DATA SPACES ASSOCIATION

## Functional agreements

- Role models
  - separation of duties
- Trust scheme / anchor

## Technical agreements

- Specifications for the standard
- Service descriptions
- Reference components

## Administrative agreements

- Provider of essential services
- Handbooks

## Maintenance agreements

- Reliable development of standard, processes and artefacts
- Policies for services

## Legal agreements

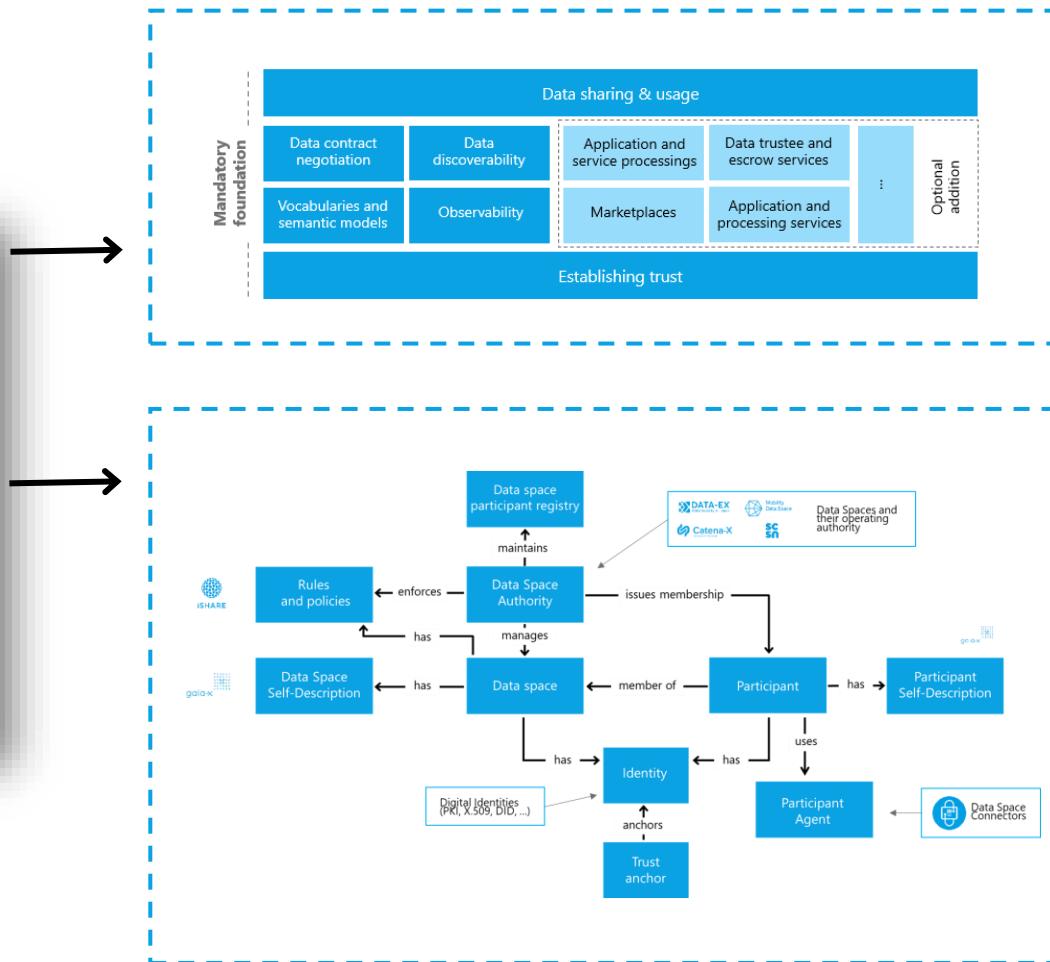

- Legal policies, regulation
- Usage policy enforcement

\* [IDSA Rulebook](#)

# IDSA Rulebook – design and governance scheme for data spaces

*We play an ecosystem game*

INTERNATIONAL DATA  
SPACES ASSOCIATION

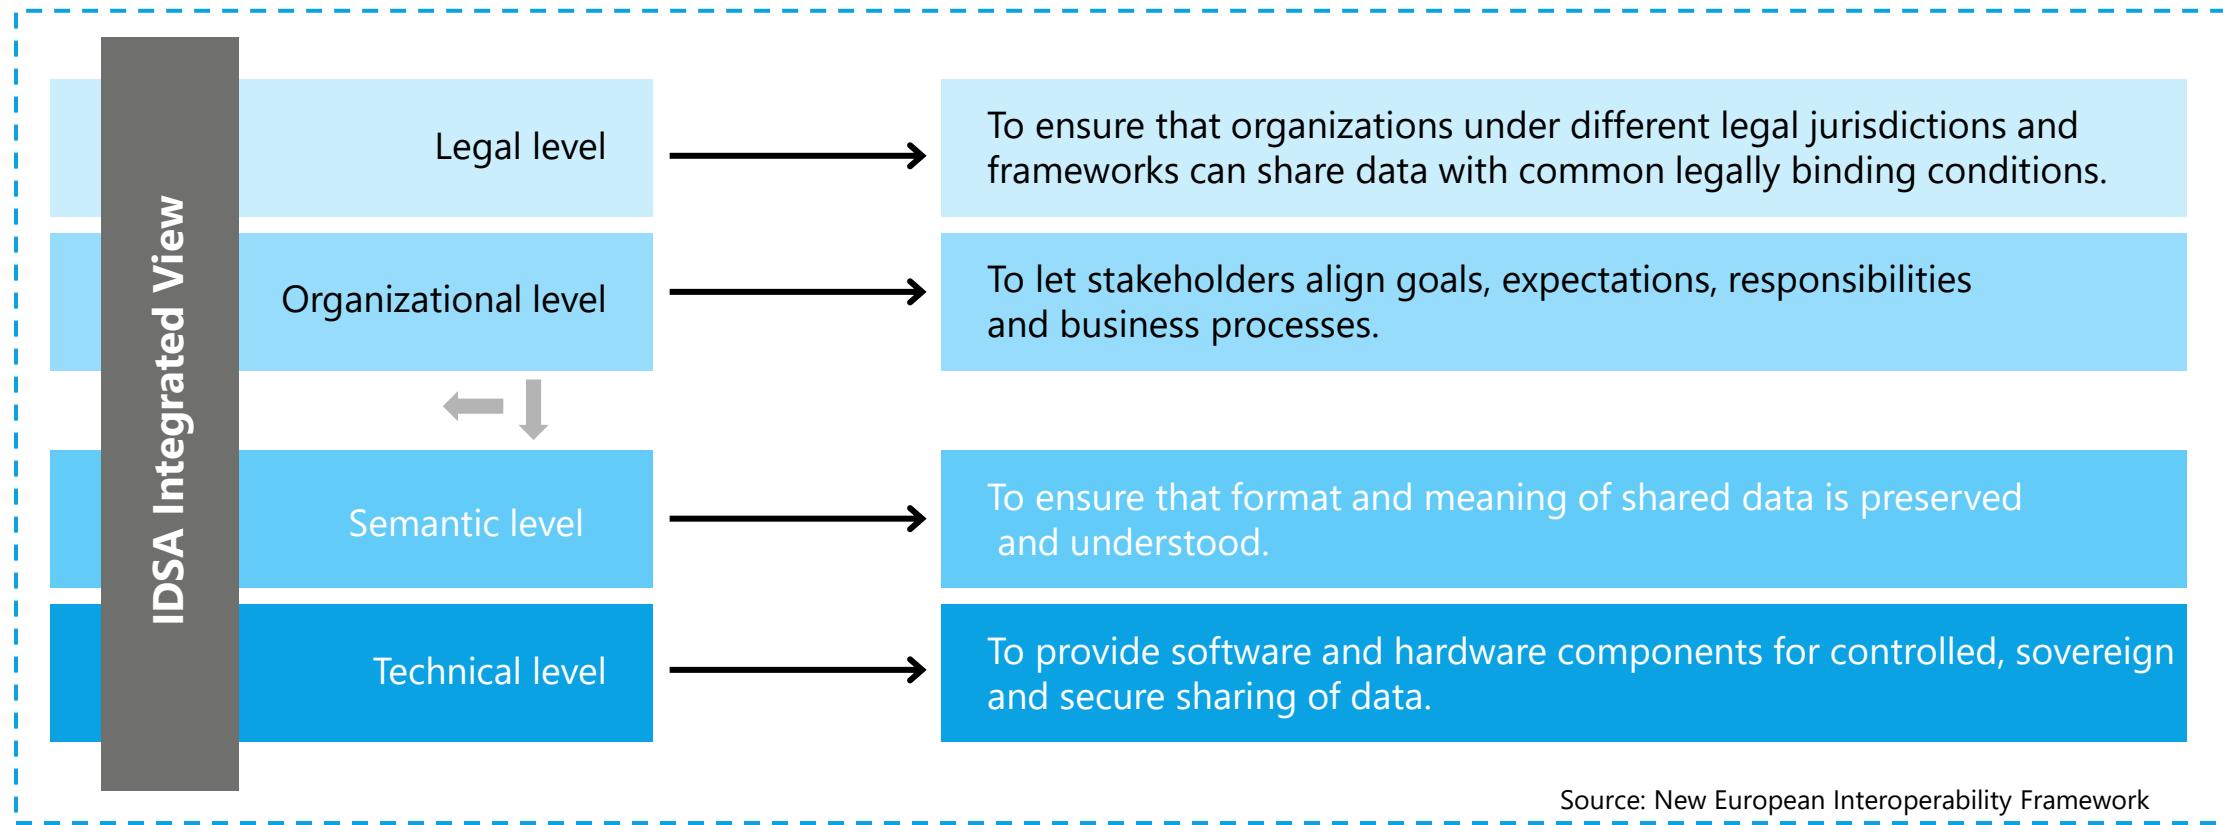

The **IDSA Rulebook** brings together ...

- the requirements from data economy ...
- with measures for technical, semantic and organizational interoperability.

\* [IDSA Rulebook](#)

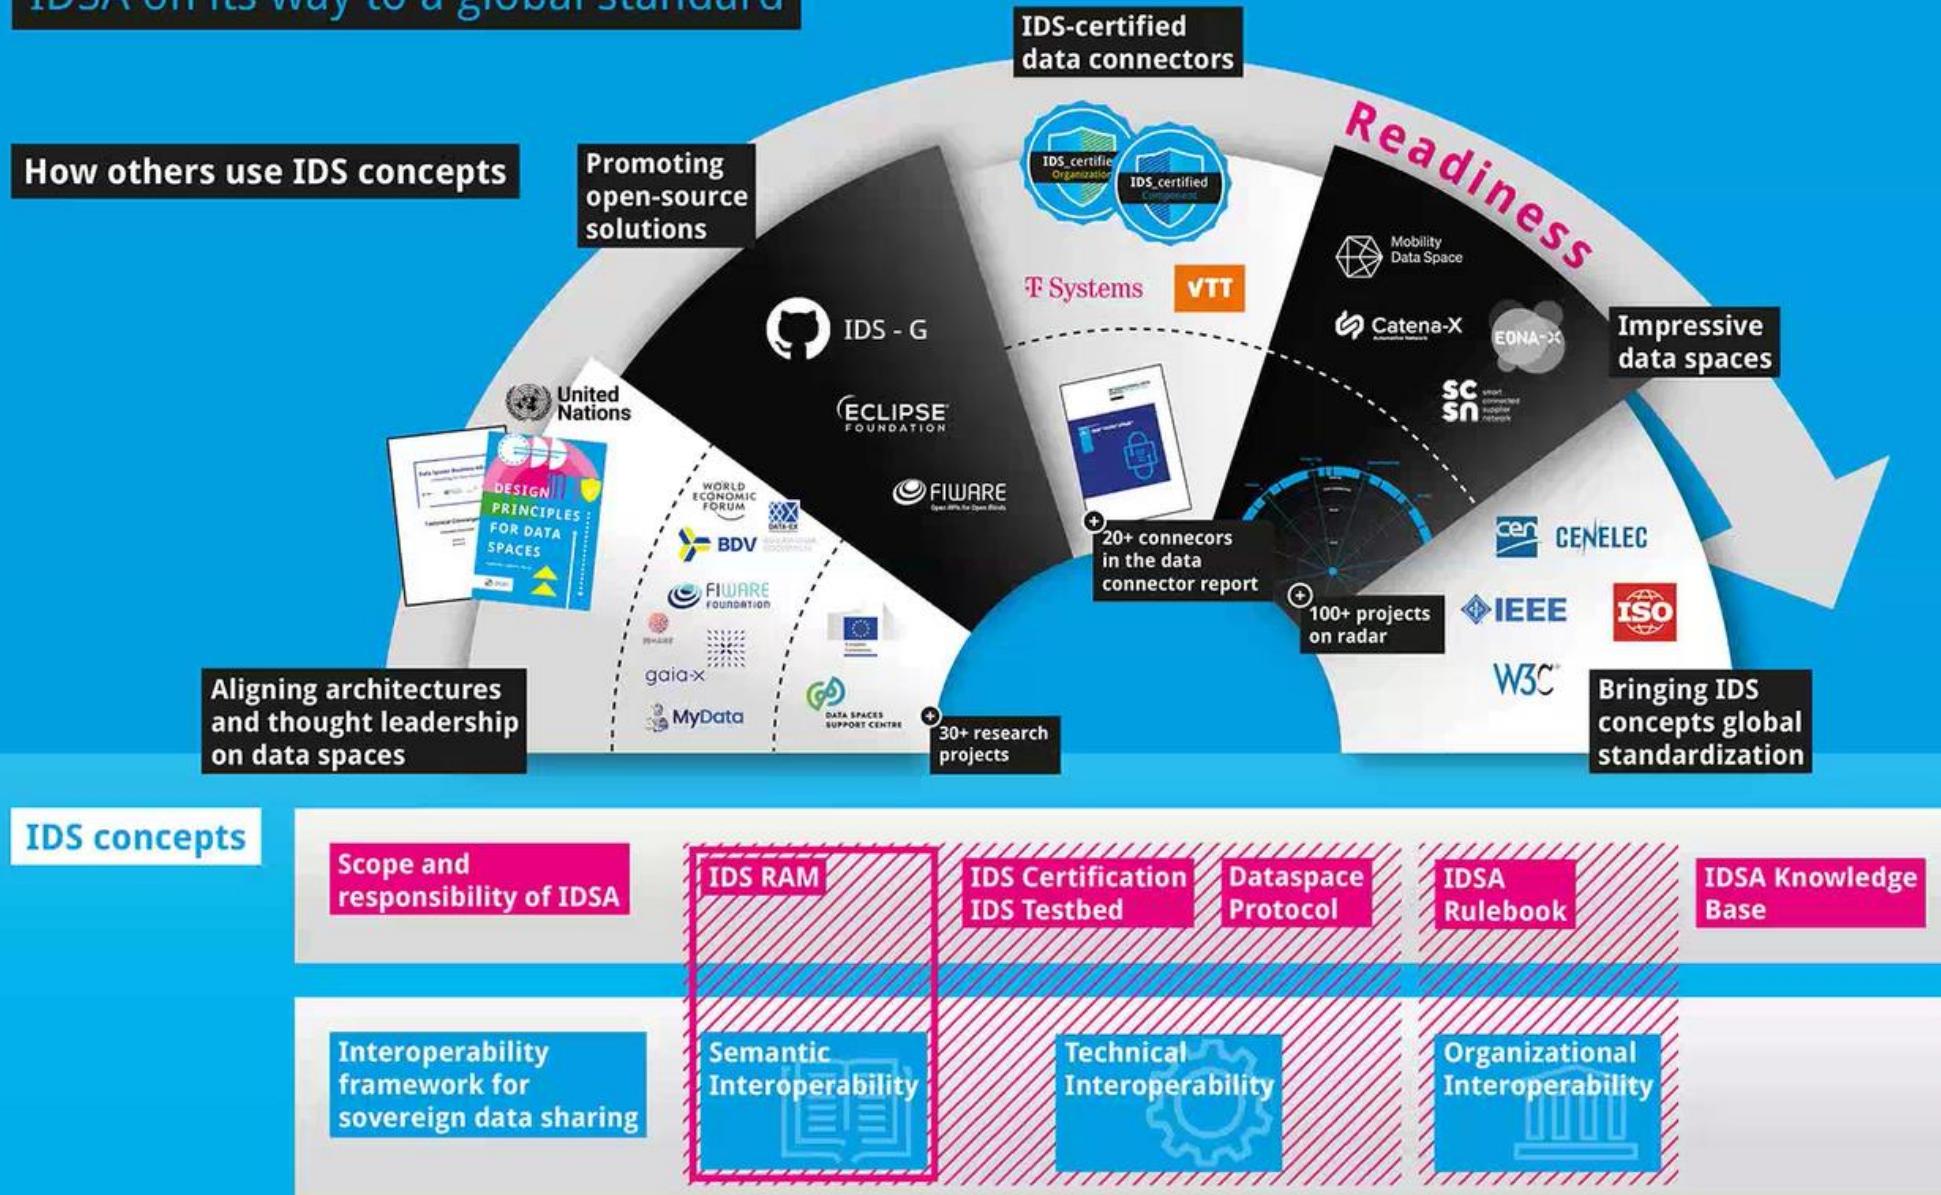

# Layered model for interoperability

- **Intra data space interoperability**, between the data space authority, processing, and data sharing building blocks within a single data space instance
- **Cross data space interoperability**, between multiple data space instances at each of the functional levels

# A holistic approach to bring data spaces to global scale

IDSA on its way to a global standard

# Reference Architecture 5.0

*A consistent, completely new version as thorough base for standardization*

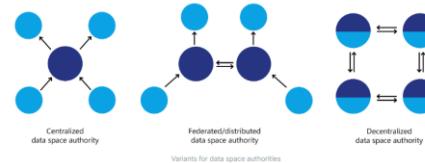

INTERNATIONAL DATA  
SPACES ASSOCIATION

## Align with the latest developments

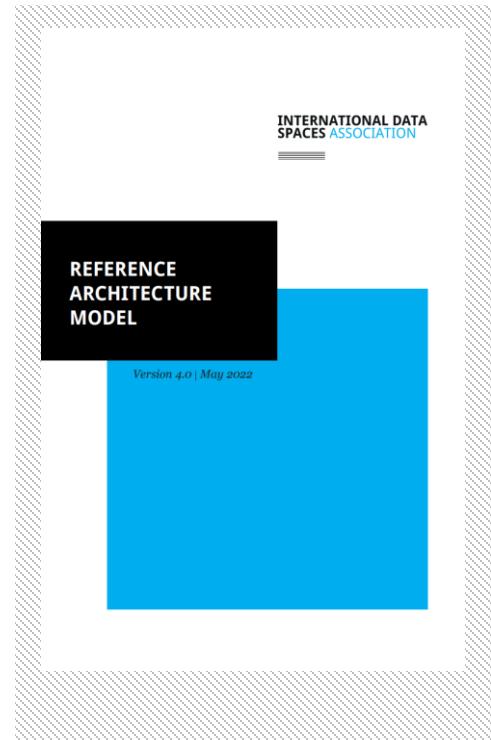

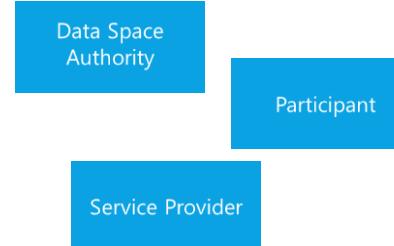

e.g.  
Dataspace protocol,  
Rulebook, DSSC  
blueprint, etc.

## Include decentralized and federated approaches, e.g., in Trust framework

## Different roles in data spaces: Provide architectural guidance for all

\* *IDSA Reference Architecture*

# Make the connection and enable data economy

*Data space connectors lay the basis for interoperable trustful data sharing*

INTERNATIONAL DATA  
SPACES ASSOCIATION

- » **Connects participants in a data space** – to share, utilize, benefit from data.
- » Ensures **trust through IDS Certification** and **cyber security** assessment.
- » Connects to **trust frameworks** and **identity management**
- » Includes **identity & policy management**, ensures **data usage control**.
- » Guarantees **interoperability**.
- » Understands and enforces **data usage policies**.
- » **Master** for other connectors of diverse feature sets.

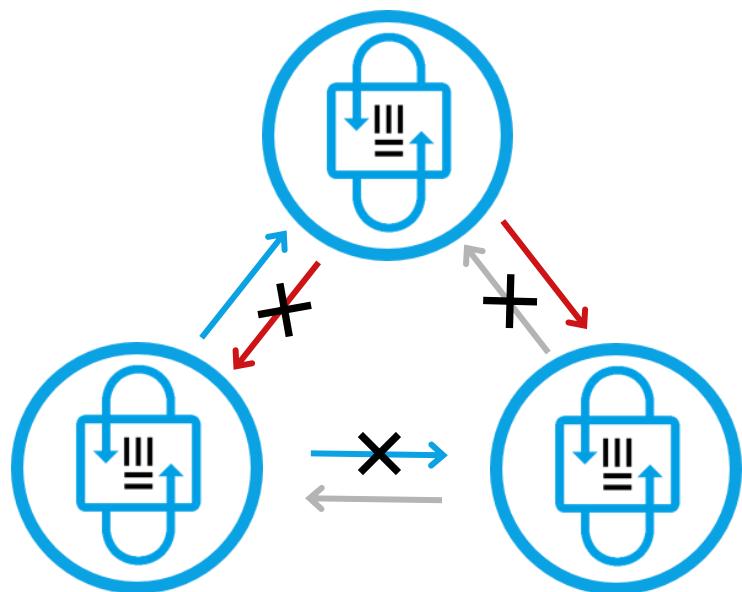

# The Dataspace Protocol

*Advancing interoperability*

INTERNATIONAL DATA  
SPACES ASSOCIATION

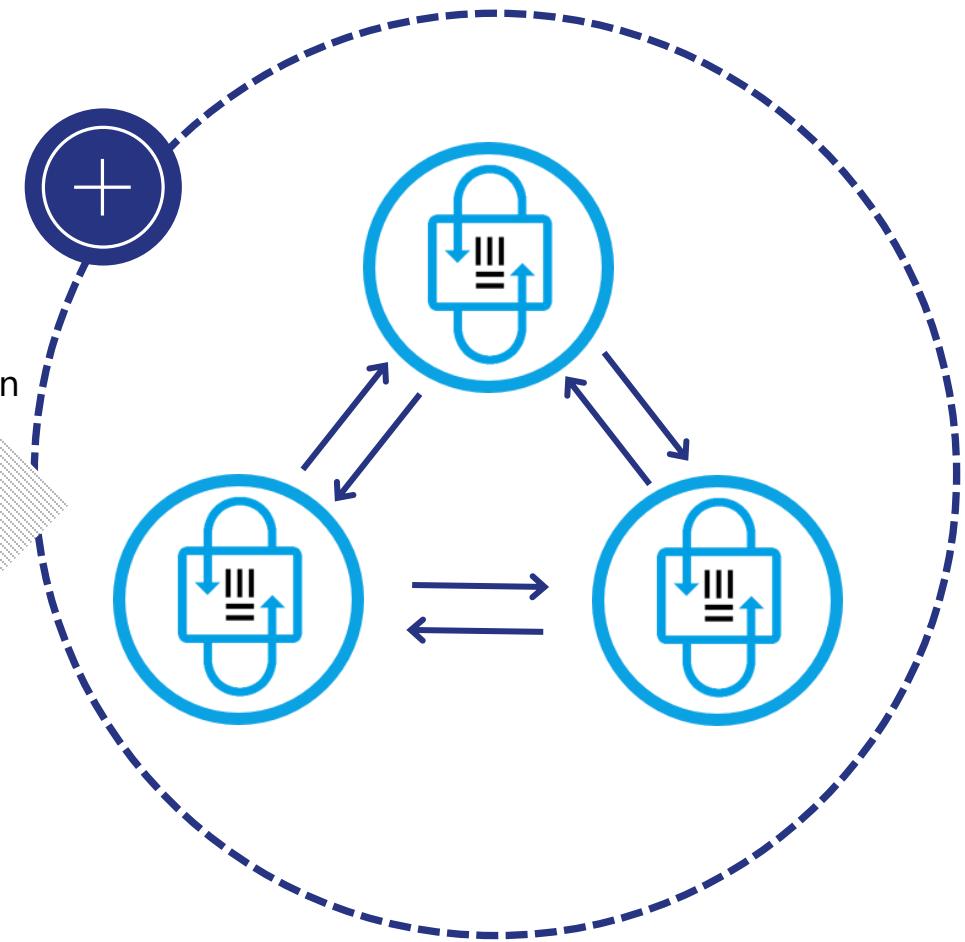

A **growing number of connectors** is witnessed. But how do we ensure that these connectors are **interoperable**?

Initiating the implementation  
of the **Dataspace Protocol**

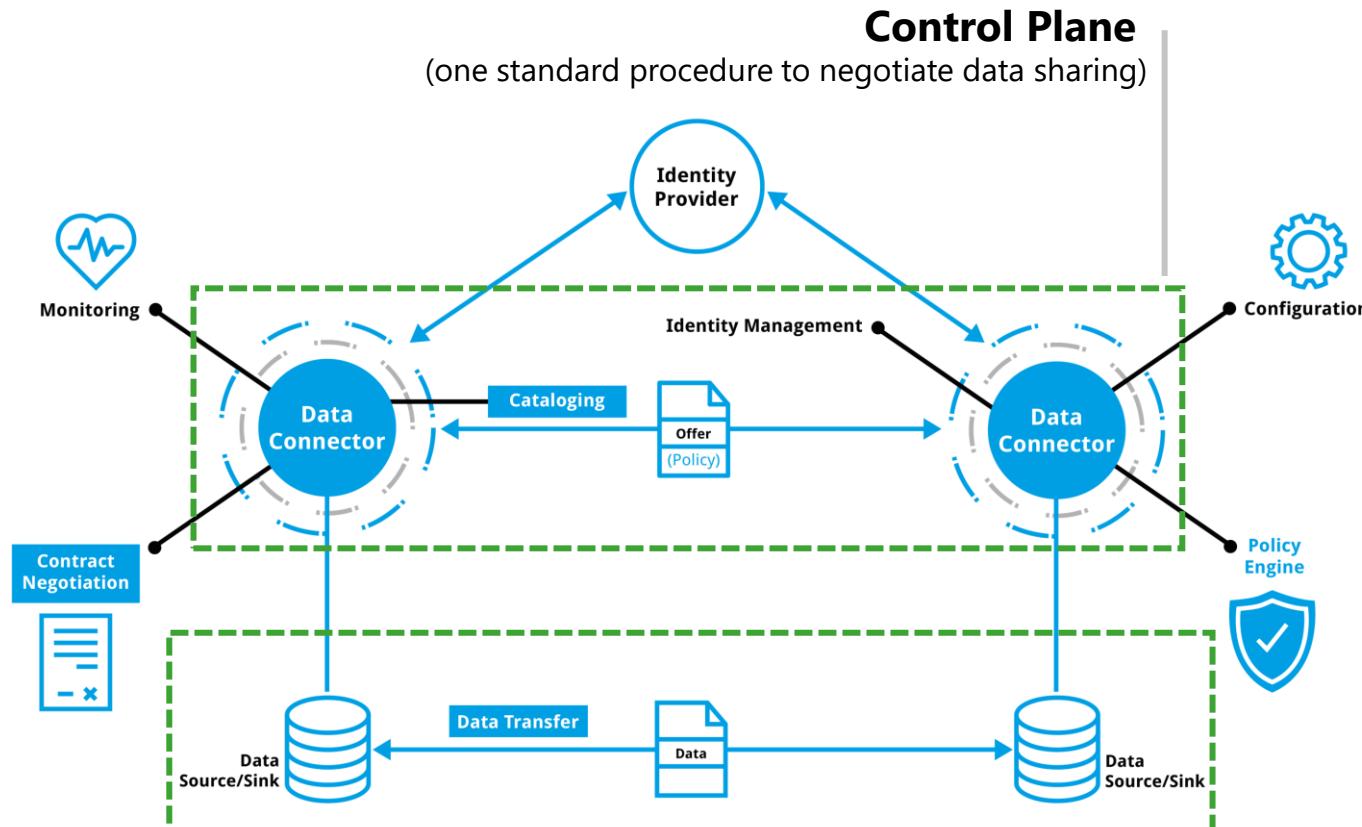

Check Dataspace Protocol:

# The need for Dataspace Protocol

*Ensuring data space interoperability*

INTERNATIONAL DATA  
SPACES ASSOCIATION

## Data Plane

(several possible for different data sharing scenarios:  
confidential data sharing, streaming data, event based data, edge devices, ...)

Promotes seamless technical **interoperability**, while addressing certain aspects of semantic interoperability.

Enables **standardized data exchange** across different data space instances.

Provides **flexibility** and **scalability** through the separation of control plane and data plane.

# International and European Standardisation

*IDSA data space standardisation efforts*

INTERNATIONAL DATA SPACES ASSOCIATION

## International Standardization

- » ISO/IEC JTC1 SC38 and AWI 20151 – Dataspace Concepts and Characteristics
- » Eclipse Dataspace Working Group Protocol specifications, Dataspace Protocol and beyond

## European Standardization

- » Standardisation Request on Data Act
- » CEN/CENELEC Trusted Data Transaction
- » CEN/CENELEC JTC25

# ISO/IEC JTC1 SC38

## *AWI 20151: ataspaces concepts and characteristics*

INTERNATIONAL DATA  
SPACES ASSOCIATION

### **SC38 AWI20151**

- » Just finished Working Draft 3
- » Targeting now Committee Stage

### **Open for contributions and participation!**

- » Editor is Geoff Clarke (Australia)
- » Project was moved from WG5 to WG6
- » Active liaison with Eclipse Foundation
- » Active liaison with SC41 IoT and Digital Twins (among others).

### **Content overview**

- Trusted data sharing using dataspaces
  - Relation to organizational autonomy and organizational interoperability
- Characteristics
  - Maintain control
  - Trust
  - Discover data
  - Negotiate data-sharing contracts
  - Orchestrate data-sharing and data-use
  - Observability
  - Interoperability
- Logical components
  - Multi-level policies
  - Semantic models
  - Communication protocols
  - Processes and rules

# Eclipse Dataspace Working Group

## *Overview Specifications*

INTERNATIONAL DATA  
SPACES ASSOCIATION

Eclipse Conformity Assessment  
Policy and Credential Profile  
Eclipse Data Rights Policy  
Profile

Eclipse Dataspace  
Decentralized Claims Protocol

### Dataspace Protocol

(Planned PAS submission to  
ISO/IEC JTC1)

<https://dataspace.eclipse.org/>

<https://www.eclipse.org/projects/efsp/>

### Policy & Credential Profiles

Define an ODRL policy model, subject format for verifiable credentials, and semantics associated with the former

### Claims Protocols

Message protocols for proving the identity of, and claims about, dataspace participants

### Bindings

Application of abstract message protocols to wire protocols such as HTTP

### Base Protocols

Abstract message protocols for catalog, contract negotiation, and data transfer

# IDSA's core position

*How can we support you?*

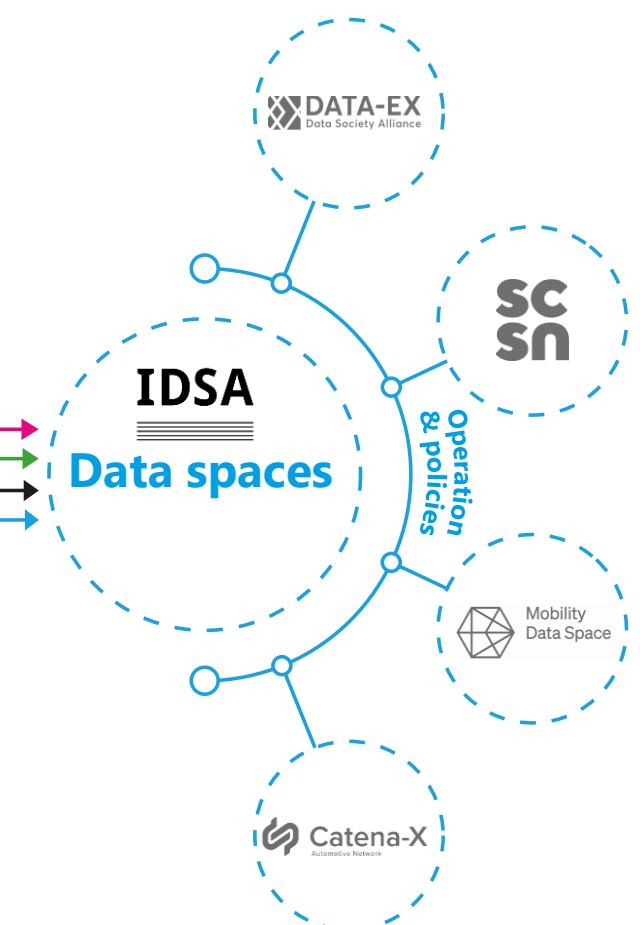

INTERNATIONAL DATA  
SPACES ASSOCIATION

INTERNATIONAL DATA  
SPACES ASSOCIATION

*IDSA support services*

- End users frame conditions, define requirements, raise expectations for data spaces
- Coordinate and provide consultation for building and operating data spaces
- Help define governance for data spaces
- Technical frames & components for data spaces, operate them & define policies
