VICOMTECH

Departamento CCAS (Connected and Cooperative Automated Systems)

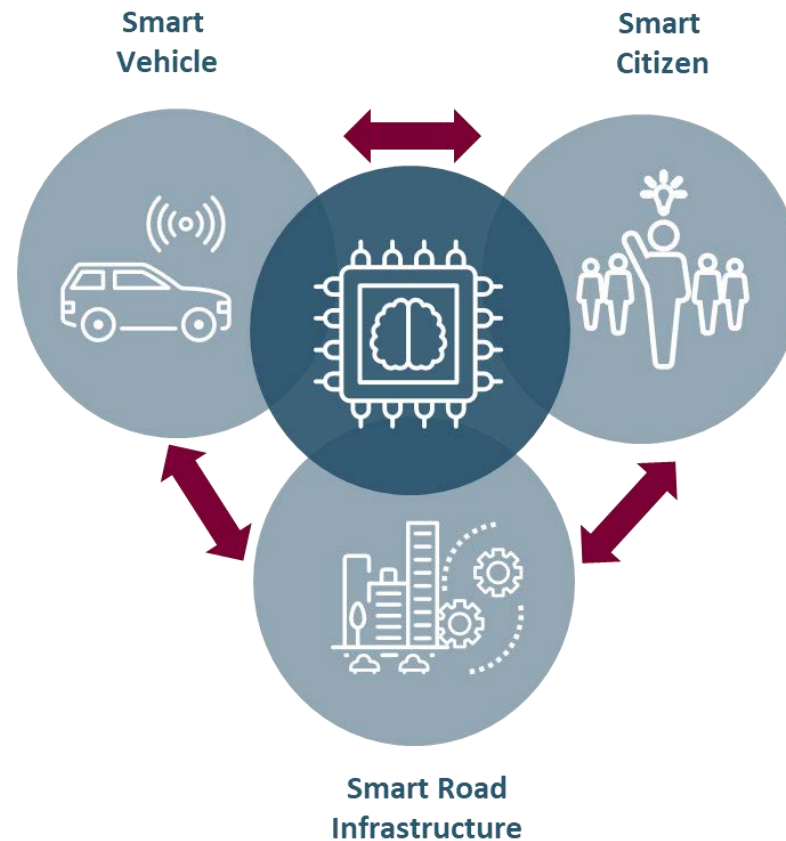

Soluciones aplicadas

Asistencia a la conducción y conectividad

Infraestructuras inteligentes

Servicios de movilidad inteligente

Tecnologías 5G

CCAM

(Connected and Cooperative Automated Mobility)

Integración de tecnologías avanzadas en vehículos e infraestructuras para permitir una comunicación y cooperación fluidas entre ellos.

Aspectos clave:

Sistemas cooperativos, Vehículos conectados,
Conducción automatizada

Este concepto pretende mejorar la seguridad vial, la eficiencia del tráfico y la movilidad en general aprovechando la conectividad y la automatización.

VICOMTECH

Proyecto FAME

Framework for better coordination of largescale demonstration pilots in Europe and EU-wide knowledge base (CCAM Partnership)

Consortium

Proyecto FAME: Objetivos

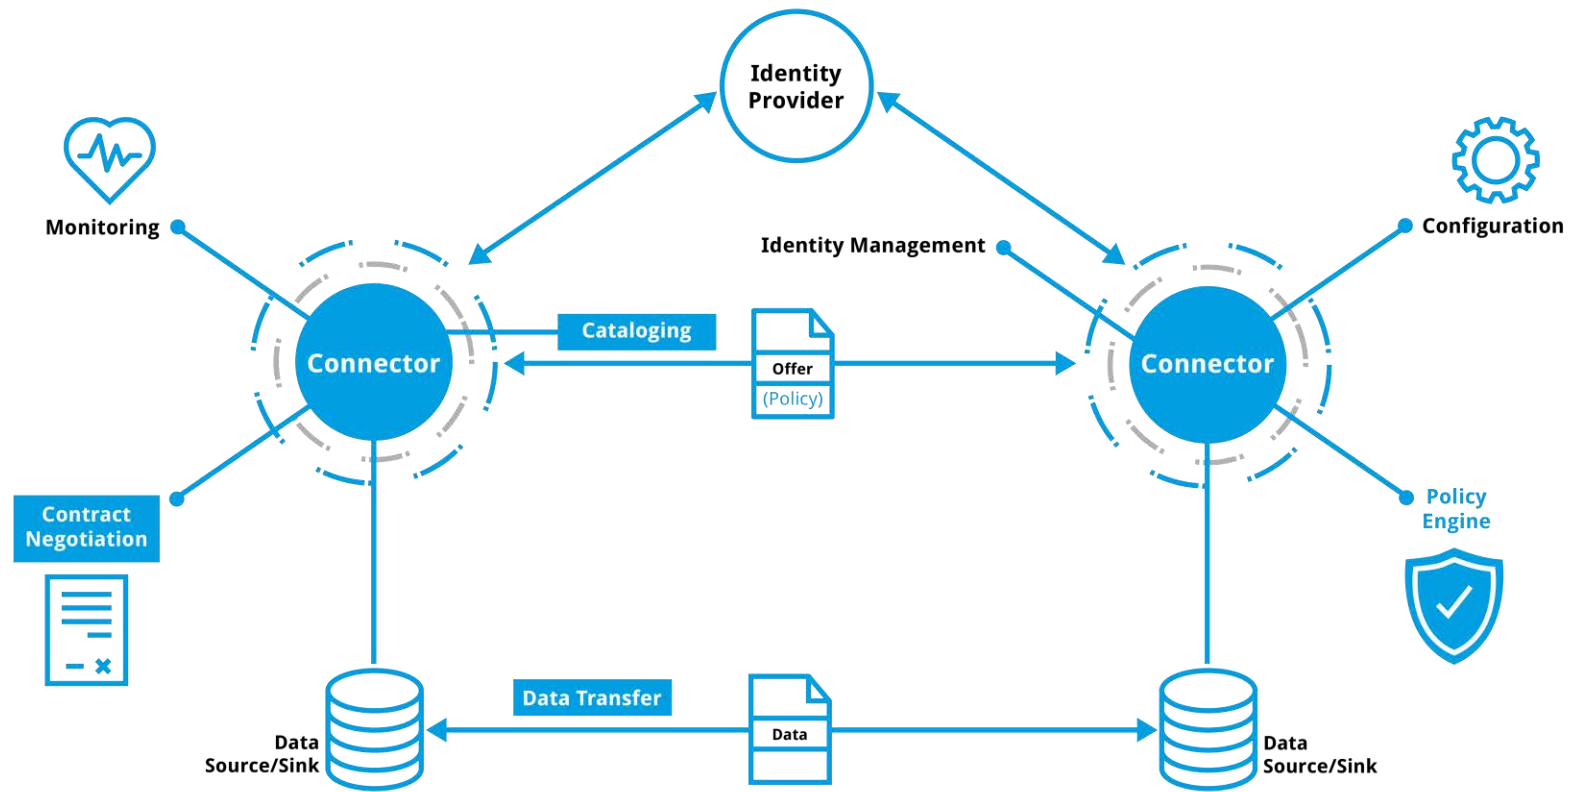

FAME Objectives

- Establish a **European framework for CCAM testing** activities on public roads comprising taxonomy, the CEM, CCAM TDS and a legal & ethical framework
- Develop a **common evaluation method (CEM)** that provides guidance on how to set up and carry out an evaluation or assessment of direct and indirect (wider socio-economic) impacts directed at different user groups.
- Develop a **CCAM test data space (TDS)** to establish trusted data sharing between different types of stakeholders within the CCAM community.
- **Engage the stakeholder network** of the CCAM partnership and enrich it with the broader European and international CCAM stakeholder community for the further development, alignment and exploitation of the content of the Knowledge Base and the development of a common methodology and testing framework
- Enhance the **EU-wide Knowledge Base** with an efficient governance mechanism, ensuring continuous contribution from CCAM stakeholders to serve their needs and the CCAM partnership (*SRIA*)

Test Data Space Components Adoption Compliance with GAIA-X and IDSA specifications, based on EDC

Eclipse Dataspace Components (EDC)
